# Town Hall: Built for More

## Featured Webinar: Getting Smart Built For More Townhall—OST and the Future of Work

In this engaging webinar, hosted by Getting Smart and moderated by its CEO Tom Vander Ark, All Stars Project CEO Chris Street joins as a panelist in a powerful conversation on how Out-of-School Time (OST) programs are shaping the future of work.

Drawing from the new book, "Built For More: The Role of OST in Preparing Youth for the Future of Work," which includes a co-authored chapter by Chris Street, the discussion highlights how OST programs are helping young people develop strengths that matter most for today's workplace.

Chris shares how All Stars Project's eight dimensions of development -- including personal responsibility; vocational competency; confidence; improvisation; appreciation; giving; interpersonal competence; and an open worldview -- empower young people to navigate challenges and succeed in the workplace. They are closely related to what many call 21st-century skills—not just mastering specific knowledge, but learning how to learn, building relationships, and collaborating with others.

Watch now to see how OST and the All Stars Project are helping youth across the country prepare for meaningful careers by developing the skills that matter most.
